

## Supplementary Information

Supplemental figure S1.

**Figure S1.** Histological targeting of the amygdala while the animal is not align in stereotaxic coordinates. **A, B.** Two examples of histological reconstructions following targeting of the pipette into the coordinates of the amygdala when the animal is head-fixed in non-stereotaxic coordinate system. **C.** ML location of the center of the amygdala (green), its width (horizontal bars) and Dil marks (red) relative to the midline (n = 7 animals). Black line marks the targeted coordinates. Scale bars equal 2mm.
